

CV

Name	Ashraf Mohamed Mohamed Ali Soliman
Nationality	Egyptian
Status	Married
Language	Arabic, English
Workplaces	Agricultural Research Center (ARC), Central Laboratory for Aquaculture Research (CLAR), Abbasa, Sharkia, Egypt. Saudi Aquaculture Society (SAS).
Position	Professor.
Specialization	*Expert and consultant in freshwater and marine tilapia aquaculture. *Water quality laboratory management and environmental assessment regarding fish farms.
Telephone	Mobile&  +966 506957635 :  00201033090740
E-mail	asolimanh@yahoo.com & ashraf@sas.org.sa
Skills Area	*Consultant and expert in modern fish farming systems that rely on water conservation in fish farming, such as biofloc technology, water recycling systems (RAS), and water recycling inside earthen ponds (IRPS). *Managing of the water quality laboratories as initiation, ISO auditing, outlining and establishment. *Marine Tilapia fish Farm management. *Design and management of a red tilapia fish farm at the Faculty of Marine Sciences, King Abdulaziz University, under the supervision of the Saudi Aquaculture Society. *Aquaculturest, fish and water biologist, Fresh water fish farms management. *Preparing feasibility studies for environmentally friendly fish farming projects. *Developing and overseeing sustainable solutions for struggling fish farming projects.

	*Correcting the course of stalled projects and providing the necessary corrective plans to achieve success and sustainability. *Providing the needs of fish farms according to the scientific and technical requirements of each project.
Qualification	Ph. Doctoral degree in Science of Practical Zoology (relation between the water quality of recycling well water system and fish performance under intensive culture system of tilapia) "PRACTICAL STUDIES ON THE USING OF RECIRCULATED GROUND WATER FOR MAXIMUM PRODUCTIVITY OF <i>Oreochromis niloticus</i>. The study aimed to evaluate the possibility of controlling and using recirculated aquaculture effluents water for culturing <i>O. niloticus</i> as well as Maximizing the productivity under commercial practices of <i>O. niloticus</i> reared in concrete ponds subtropical climatic area (KSA). Master degree: of Science of Zoology, 1997" Food and Feeding Habits of Black carp", the study aimed to illustrate the range of preference of black carp for different snail species, and different other food items, and how it can use in the biological control of snails (intermediate host for harmful disease) of BELHRSIASES Pre-master: On fish biology, comparative anatomy and histochemistry, 1993. B. Sc. of Science 1989. (Special Zoology, 1989).
Experience	1- Manager of Marine Tilapia Production Units. Saudi Aquaculture Society from 14/01/2025 till now. On management of fish reproduction, nursery & rearing, production and water quality management for all production stages. 2- Initiation of the Biofloc Technology, in KSA on fresh water fish farm Tilapia (<i>Oreochromis niloticus</i>) in three different places to be endemic technology all around the KSA. With three educational workshops for many KSA fish farmers from different regions through 2016 and 2017. 3- Manager of the water quality and soil lab. For the Jeddah Fish Health and Safety Lab. (JFHSL) Fisheries Research center (FRC), Ministry of Agriculture, KSA, from 2013 up till 2018, Water quality analyzing, reporting, evaluating and controlling for FRC fish and Shrimp farms open Red Sea water as well as different marine and ground water (inland water) fish farm all over the

	KSA. Participation in the ISO 17025 Program, Caleberator, finalizing, For JFHSL ISO system during March, 2015 and 2017. 4- Management and supervision of research sector ponds of Central Laboratoy for aquaculture research CLAR, Abbasa, Sharkia, Egypt. From 2001 to 2006. 5- Supervisipon of fish marketing polycies and production activeties for the production sector. 6- Supervision of one Ph. D Thesis, and 3Master degrees of science planning, revision and approving. 7- Joined to the Arab Fisheries Company (AFC) (affiliate with the arab leag) from 1997 untell 2001as a manager of fresh water sector responceble on the following: *Designing the recirculating system for ground water with controlling all physical and chemical water quality parameters. * Management of fresh water sector for the Intensive culture of <i>Oreochromis niloticus</i> started from reproduction stage to marketing stage. *Intensive fish farm designing, establishment, and management. *Evaluation of the economic & pioneer studies and technical consultant for fresh water sector for development national bank in Suadi arbaia. VII- General management of aquaculture activeties (Ecology, Biology of water, fishes and bottom founa) through dry and wet lab's and also withen research & production ponds of CLAR at Abbasa, since 1992, tell 1997 about the following: * Management the water quality earthen research ponds. * Collection and systematic of zooplankton as well as bottom founa (snails, worms, etc) *Analysing of stomach and intestinal contents of culture fishes (cat fishes, carp species and tilapias). * Studies on the food and feeding habitats of cultured fishes.
Training	1- Complete for updating in the symposium entitled "Internal Audit for of ISO/IEG 17025:2017 According to ISO 19011:2018" National Reseach Centerm Gizam Egypt. 23 January, 2020 2-Complete for updating in the symposium entitled "Ucertainty Estimation in Testing Laboratories as requirement of ISO/IEG 17025:2017" National Reseach Centerm Gizam Egypt. 23 December, 2019. 3-Secssufully pass in completing the applicationof the general requirement for the cmpetance of: CALIBRATION AND

	TESTING LABORATORIES (ISO 17025:2005) as a direct application program for WATER AND SOIL LAB., HEAD withen fish health and safety laboratory in total of 60 as workshop & site hours. 4-Intensive training program held in Oklahoma State University, U.S.A. under the supervision of Prof. Dr. William L. Shelton, that included the feeding biology of black carp, artificial propagation of mirror carp, Gynogenesis, and androgenesis of carp to produce the triploidi species, 1994. 5- Intensive training course in fish disease, at faculty of vitrenary, king Fiesal University, Saudi Arabia for two weeks (1999). 6-Training courses on water quality aqucultural environemts, fish neutrion, handling and the integration of Aquaculture with irrigated agriculture, CLAR of Abbassa, 1994. 7- Many training cources for general aquaculture, aquatic environment, water and soil analysis, held at (CLAR) Abbassa, Egypt. 8- Intensive training program on principles of aquaculture that held in the Egyptian International center for Agriculture (EICA). For three successive months, and included biology & ecology and biochemistry and disease, 1992. .
Projects	Participation in UNDP/GEP Engineered waterland project on the Lake of Menzalah, as specialists on macrobenthic analyser collection and identificationbesid water quality hanling and analysis. - Participation in pond Dynamic/ aquaculture collaborative Research program from May 1993 to August 1995. On the ecology and biology measurments especially on relation between water quality and bioconversion of snails and weeds by the using two fishes pp. (black carp and grass carp). I was responsible for the pond management and data collections under the supervision of Prof. Dr. William L. Shelton. Professor of reproductive biology, faculty of science, Oklahoma state Uiversity, U.S.A. List of publication: -

Technical reports	1- Interaction of plant / snail Bioconversion by grass carp and black carp in Egyptian fish culture ponds, 1993. 2- Bioconversion gastropods by black carp in Egyptian fish culture ponds, 1993. 3- Use of grass carp and black carp in Egyptian fish culture, 1994. 4- Feeding biology of black carp, 1994.

	Workshops and teaching activities: -
Teaching	1- Presentation on the changes of water quality basics under modern aquaculture techniques. CLAR STAFF, 2019. 2- Third Workshop on the Results of Application of Biofloc Technology in Riyadh and Dammam as well as Jeddah for the biggest audience of academic staff of King Abdulaziz University, King Fayssal University and Others, held in Riyadh 3/1/2018. 3- Lecture and Presentation on EFFECT OF WATER QUALITY AND SOIL OF FISH FARMES IN SAUDI ARABIA ENVIRONMENT, for the employees of aquaculture sector in the Ministry of Agriculture & Water and Environment, KSA. during 6/2/2018. 4- Second workshop for the fish farmer & owners and businessmen of aquaculture activities on the strategy of the ministry of agriculture & water and environment for introducing the biofloc technology around the KSA different regions, held in FRC JEDDAH 25/4/2017 5- First workshop on obtained results of Biofloc experiments carried in Bahrah fish farm candidate to Fisheries Research Center, North Aushor, Jeddah, KSA. held in FRC JEDDAH 2/2/2017 6- Lecture and Presentation on EFFECT OF WATER QUALITY AND SOIL OF SHRIMP FARM IN SAUDI ARABIA ENVIRONMENT, for the employees of aquaculture sector in the Ministry of Agriculture & Water and Environment, KSA. during 27/12/2017. 7- Presentation on Bio Security Scope on Water Quality and soil in aquaculture clarifying the role of water quality of aquaculture in the preservation of aquatic life as a good case according to the biosecurity bases, Holiday Inn, 15, sept. 2014, Jeddah, KSA. 8- Lecture about the biological control of harmful snakes by black carp for staff of aquaculture and food science, King Faisal University, Saudi Arabia for two weeks (1998).
WORKSHOPS:	

	9- Practical lectures in fish handling for the technical workers and farmers,1998. 10- Practical lectures in fish biology for the Afro/Asian group, through the principals of aquaculture program, 1993
